Backend Software Engineer with **2 years** of experience building production systems using **Java, Spring Boot and AI technologies**. Delivered Content Managem Twilio integrations, and **LLM-powered features (Claude API)** for banking clients, including a **57% faster** data sync. Strong foundation in RESTful APIs, microservices, Data Structures and Algorithms, and System Design.

Skills

Languages	Java, JavaScript, SQL, Python
Core Concepts	OOP, Collections, Operating System, Computer Networks, DSA, LLD, System Design
Backend	Spring Boot, Node.js, RESTful APIs, Microservices, Apache Kafka
Databases	MongoDB, MySQL, Snowflake, Redis, Database Indexing, Vector Database
Testing	JUnit, Mockito
Cloud & DevOps	AWS (EC2), AWS CloudWatch, AWS (S3), AWS Lambda, Docker, Kubernetes, Jenkins, CI/CD
AI & GenAI	LLMs, Claude API, OpenAI API, LangChain, LangGraph, RAG, AI Agents, Prompt Engineering
Tools & APIs	Git, GitHub, Twilio, Google Maps API

Technical Experience

Software Engineer — **July 2025 — Present**
Adaptware Solutions — *Chandigarh, India*

- Reduced Snowflake-to-CRM data sync runtime from **14 hours to 6 hours** (**57% faster**) by designing compound **MongoDB indexes** for the most frequent customer and account lookups.
- Owned the migration of **23,700+ records** (5,668 stations, 18,131 recruiters) from CSV into **MongoDB**, building a **Node.js** script that preserved linked contact relationships.
- Normalized phone numbers to **E.164** across CRM services, resolving failed **Twilio** calls and SMS to international numbers and enabling contact search in any format.
- Built **bulk SMS and email** in the CRM so staff can message all selected contacts in one action, cutting a client's daily email sends from **500+ to 200–300** (**~50% fewer**).
- Designed and shipped LLM-powered Next Best Action recommendations with the **Claude API** for **5,000+ customers** across **2 bank clients**, triggering real-time staff alerts and one-click follow-up emails.

Junior Software Engineer — **Jan 2025 — June 2025**
EPAM Systems — *Hyderabad, India*

- Developed a full-stack restaurant reservation platform with **Java Spring Boot and Angular**, designing **RESTful APIs** across **3 modules** (reservations, booking management, reporting).
- Implemented role-based access control and independently deployable backend services in a **microservices architecture**.

Projects

BuyBest — **Google Play**
Location-Based Android Marketplace for Buying, Selling, and Renting

- Launched **BuyBest**, an Android marketplace with **100+ listings** across **3 categories** (products, properties, services) and live users.
- Developed the **Java Spring Boot** backend (REST APIs, authentication, data persistence) and integrated **2 Google Maps APIs** (Places, Geocoding) for nearby discovery and address autocomplete.
- Cached frequently requested API responses in **Redis** and stored listing images in **AWS S3**, reducing database load and API response times.
- Built **AI-powered search** using the **OpenAI API** that detects the category from a query (for example, iPhone → Phones), ranking exact brand matches first, then similar products from other brands.

Education

B.Tech in Computer Science, *Chandigarh University* — 2021 – 2025
8.09 CGPA

Achievements

- Solved **485+ LeetCode problems** covering data structures and algorithms. *Profile*
- Received an **Appreciation Certificate** from Adaptware Solutions for contributions to product development and delivery of key projects. *Certificate*
